Ali Raza Tahir

Dubai 000000
ali.raza.tahir@hotmail.com
+971 55 770 1219

A results-driven Senior Full-Stack .NET Developer & DevOps Engineer with over 7 years of experience architecting and delivering high-performance, enterprise-level applications. Possesses deep expertise in the .NET ecosystem (.NET Core/.NET 5–8), combined with advanced proficiency in modern frontend frameworks (React.js, Vue.js, Angular, Blazor) for building secure, scalable, and responsive solutions.

Highly experienced in designing and deploying cloud-native applications on Microsoft Azure and Amazon Web Services (AWS) with a strong focus on DevOps practices, including CI/CD automation (Azure DevOps, GitHub Actions, Jenkins, GitLab), containerization with Docker, orchestration with Kubernetes, and infrastructure-as-code with Terraform and Bicep. Skilled in monitoring and logging solutions (Prometheus, Grafana, ELK, Azure Monitor, AWS CloudWatch) to ensure system reliability and observability.

Proven success in developing secure RESTful APIs, digital wallets, and payment integrations, implementing robust authentication/authorization protocols (OAuth 2.0, JWT, EIDA), and optimizing SQL Server and Oracle databases for high-performance processing. Recognized for automation, cloud cost optimization, and security-first delivery in compliance-driven environments. A proactive problem-solver with the ability to deliver end-to-end full-stack and DevOps-driven solutions from architecture to deployment and monitoring.

Willing to relocate: Anywhere

Work Experience

Senior Programmer

Ministry of Human Resources and Emiratisation (MOHRE)-Dubai
May 2024 to Present

Designed, developed, and maintained mission-critical enterprise applications for a major UAE government entity using .NET Core, C#, SQL Server, and Oracle.

• Engineered and integrated secure RESTful APIs for seamless data exchange with internal and external government systems, enforcing strict security protocols.

• Implemented and managed MOHRE's authentication system, integrating EIDA-based OTP validation and IP whitelisting to prevent unauthorized access.

• Developed Role-Based Access Control (RBAC) systems to ensure data security and compliance with UAE government IT policies.

• Built and optimized the MOHRE Wallet application:
• Frontend: Developed a modern, responsive user interface using React.js and Vue.js, enabling smooth user experience for digital transactions.

• Backend: Architected and implemented backend services in .NET 8, integrating secure payment gateways and real-time transaction processing.

• Optimized complex database structures, including stored procedures and triggers, to ensure high-performance data processing and reporting.

• Automated key governmental workflows, including employment visa processing and labor contract management, through API integrations.

• Collaborated within cross-functional Agile teams to streamline development processes from conception to deployment in UAT and production environments.

• Deployed applications on Azure Kubernetes Service (AKS) with automated scaling and monitoring.
• Implemented Azure DevOps pipelines for CI/CD, reducing deployment time by 60%.
• Automated infrastructure provisioning with Terraform for multi-environment deployments.
Technical Environment: .NET 8, C#, ASP.NET Core, React.js, Vue.js, SQL Server, Oracle, OAuth, JWT, EIDA, Azure, IIS, Git, Jira, Power BI

Senior Software Engineer (Fintech/Payments)
TEKHQS (Client: EbizCharge - US Payment Processor) | Lahore, Pakistan

Senior Software Engineer

EbizCharge-Lahore
April 2023 to May 2024

Engineered a scalable, high-volume Account Payable Automation module for a leading US payment processing platform (EbizCharge), utilizing a microservices architecture to improve system resilience and enable independent deployment cycles.
• Developed mission-critical financial features including payment gateway integrations, automated invoice processing, and vendor management systems, handling sensitive financial data in a PCI DSS compliant environment.
• Developed a high-performance frontend with Telerik UI for Blazor, creating a responsive and feature-rich user interface for complex financial operations and data visualization.
• Implemented efficient backend communication using gRPC for high-speed, compact data transfers between microservices, significantly improving performance for real-time financial data processing over traditional REST protocols.
• Contributed to the design and optimization of SQL databases to support complex financial reporting and transaction history, ensuring data integrity and accuracy.

• Set up AWS CI/CD pipelines using Jenkins and GitHub Actions.
• Implemented Dockerized microservices and orchestrated with Kubernetes.
• Designed monitoring dashboards with Grafana + Prometheus for real-time financial system tracking.

Senior Software Engineer

Macrosoft-Lahore, PK
February 2023 to August 2023

Architected and executed a full-scale modernization project for Maersk, successfully migrating their mission-critical Account Payable and Receivable modules from the obsolete Visual FoxPro platform to a contemporary, scalable .NET and Angular web application.
● Analyzed and reverse-engineered complex legacy FoxPro business logic and data structures to ensure a faithful and improved re-implementation in the new environment, preserving data integrity and all functional requirements.
● Developed a robust .NET backend with RESTful APIs to handle complex financial transactions and designed a responsive Angular frontend to deliver an intuitive user experience, dramatically improving system usability and performance.
● Mitigated key business risks associated with outdated technology, resulting in enhanced security, reduced operational maintenance costs, and a future-proof platform for new feature development.
● Worked on developing and customizing SharePoint Online solutions to enhance team collaboration and streamline business processes. Created custom web parts, document libraries, and workflows using SPFx, Power Automate, and client-side scripting. Collaborated with

cross-functional teams to implement automated workflows, optimize content management, and ensure best practices in SharePoint governance.

DevOps .NET Full Stack Developer

Techverx-Lahore, PK

May 2020 to July 2021

Spearheaded the end-to-end development of "BNB Yacht," a greenfield web application for the US market designed to charter boats and book event venues, taking the project from initial concept to a live, production-ready system.

• Architected a scalable microservices solution using the ABP.IO framework before its official microservices boilerplate was available, demonstrating deep framework expertise and the ability to implement complex patterns from first principles.

• Engineered a robust backend with .NET-based microservices APIs to handle booking transactions, user management, and payment processing, ensuring high performance and reliability for the core business logic.

• Developed a dynamic and responsive frontend using Angular 14 with Angular Material UI to create a modern, intuitive, and seamless user experience for customers.

• Implemented and optimized a full CI/CD pipeline using Jenkins to automate builds, testing, and deployments to the AWS cloud, significantly reducing release cycles and improving deployment reliability.

• Collaborated effectively within an Agile cross-functional team, contributing to code reviews, mentoring junior developers, and ensuring timely delivery of features in a fast-paced environment.

• Built full CI/CD automation with Jenkins, deploying microservices on AWS ECS/EKS.

• Integrated infrastructure-as-code with Terraform for AWS resources.

Technical Environment: Angular 14, Angular Material, .NET Core, Microservices Architecture, ABP Framework, Docker (if used), Jenkins, CI/CD, AWS (EC2, S3, RDS, etc.), Git, REST APIs, SQL,Server/ PostgreSQL.

Junior Software Engineer

University of Sialkot-Sialkot, PK

June 2018 to May 2020

Designed, developed, and maintained key modules for the university's proprietary ERP system using ASP.NET MVC, significantly streamlining administrative workflows and centralizing data management across departments.

● Developed a comprehensive Learning Management System (LMS) facilitating online course material distribution, assignment submissions, grade management, and student-teacher communication, supporting remote learning initiatives.

● Engineered a full-featured Employee Management System (EMS) to automate HR processes, including employee records, attendance tracking, payroll integration, and performance reviews, improving HR operational efficiency by over 30%.

● Built a robust Library Management System that automated cataloging, book issuance/returns, fine calculation, and member management, reducing manual record-keeping and providing real-time inventory status.

● Utilized Entity Framework for database interaction and SQL Server for designing optimized, relational databases with complex stored procedures and views to generate critical operational reports.

● Implemented role-based security (RBAC) across all modules to ensure data privacy and integrity, providing students, faculty, and staff with appropriate levels of system access.

● Created dynamic and responsive user interfaces using Razor views, HTML5, CSS3, Bootstrap, and jQuery, ensuring a seamless and intuitive user experience for a diverse user base.

Technical Environment: ASP.NET MVC, C#, Entity Framework, SQL Server, JavaScript, jQuery, HTML5, CSS3, Bootstrap, RESTful APIs, TFS/Git.

Education

Computer Science (Bachelor of Computer Science)

University of Gujrat-Gujrat, PK

September 2015 to October 2019

Skills

- Organizational skills (7 years)
- Driving
- Programming Languages:C#, SQL, JavaScript, TypeScript, AI & Data Analysis,Python, HTML5, CSS3Frameworks & Libraries:.NET Core/.NET 5/6/8, ASP.NET MVC, Entity Framework Core, Blazor, React.js, Angular,Sharepoint,jQuery, BootstrapDatabases:Microsoft SQL Server, Oracle, MongoDB, PostgreSQLCloud & DevOps:Azure, AWS (EC2, IAM), Docker, CI/CD (Jenkins, GitLab), Terraform, KubernetesTools & Other:Git, Jira, Postman, Swagger, RabbitMQ, GRPC, SignalR, Identity Server 4, Kendo UI, Telerik,Microsoft Azure (App Services, Functions, AKS, Key Vault, Service Bus), AWS (EC2, S3, RDS, IAM, Lambda, CloudWatch),Docker, Kubernetes, Helm,Azure DevOps Pipelines, Jenkins, GitHub Actions, GitLab CI/CD,Terraform, Bicep, CloudFormation,Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Azure Monitor, AWS CloudWatch,Ansible, PowerShell DSC,Vault, Key Management, SAST/DAST (SonarQube, OWASP ZAP) (7 years)
- Microsoft Office

Certifications and Licenses

Best Performance Award From MOHRE

September 2025 to Present

🏆 Best Performance Award – Ministry of Human Resources & Emiratisation (MOHRE)

Received formal appreciation and recognition from the Undersecretary of MOHRE for exceptional performance, dedication, and delivery of high-impact digital solutions. Acknowledged for:

• Demonstrating strong technical expertise and innovation in developing secure, scalable enterprise applications.

• Leading critical projects such as MOHRE Wallet and API integrations with government systems, ensuring compliance with UAE IT policies.

• Contributing significantly to enhancing operational efficiency, data security, and citizen-facing digital services.

• Consistently exceeding expectations through hard work, collaboration, and proactive problem-solving.
