Job Description – Full Stack Developer

Position Overview

We are seeking a highly skilled Full Stack .NET Developer with strong expertise in ASP.NET MVC, C#, SQL Server, and Azure Cloud Services. The ideal candidate will have proven experience in building and deploying scalable web applications, integrating with Azure services. This role requires hands-on development, troubleshooting, and collaboration with cross-functional teams to deliver high-quality solutions. Should be proficient in the below tech stacks:

Webapps

- Backend - ASP.net MVC(Strong), C# (Strong), Integration with Azure MFA Authentication
- Database - SQL Server (Strong)
- UI - JavaScript, jQuery, Medtronic UI, Bootstrap, HTML/CSS, Draw flow (Plugin), Custom jQuery Grids.
- File Storage - Azure BLOB Storage
- Debugging skills to check Azure App service Logs and database Logs and should have skills to write ad hoc SQL Queries to find and fix any data issues.
- Should have strong skills in integration with external Token-based APIs. For ex Azure AD and Velocity APIs are used

Azure API Integration

- Graph APIS to add/remove users from Azure AD Group
- Graph APIs to get User details from AD after Login
- Graph APIs to get Logged User AD Group APIs

Function Apps

- Azure Functions - Creating and managing Azure Functions, understanding how to view logs and debug function calls/runs.
- VS Code IDE - Comfortable in development/deployment/debugging Azure functions from VS Code.
    - HTTP Trigger Functions
    - Service Bus Triggered Functions
    - Timer Trigger Functions
- Version Control - Comfortable with Azure DevOps and Git for managing codebase and code branches.

Deployment/Azure Components: Azure App Service, Azure SQL Database, Function apps, Azure Service Bus, Event Grid,

DevOps

- Knowledge of using Repos, Branches, and Pull requests.
- Should be able to create Azure CI/CD Pipelines and use the same for Deploying Code

Code versioning Tools

- Azure DevOps, Git, Tortoise Git
